

Files

In this package we have 2 file folders editable. In the PSD files are Photoshop, and XCF files that can be used by the GIMP.

Each type of card is composed of 2 files, one file forward and one back of the card.

There are 4 different models: **Blue**, **Greek**, **Modern** and **Gold**. The texts are distributed through the layers, just edit them.

Colors

To change the color scheme, just change the background color and then the colors of each text box.
